

PRODUCTS SERIES

Quick Guide

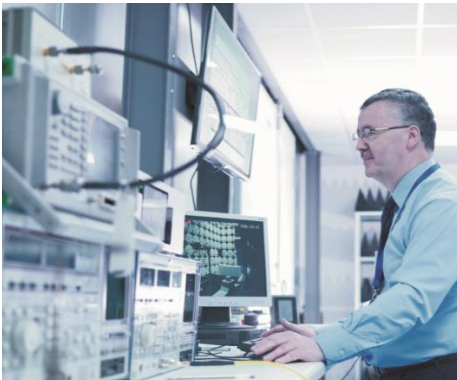

TO EMPOWER USERS WITH DIVERSIFIED PROFESSIONAL TRUNKING COMMUNICATION SOLUTIONS

Founded in 1989, BelFone, a state-level high-tech enterprise, is a leading technology and solution provider of mission and business-critical communications, with our focus on the field of professional radio communications and our clientele all over the globe. With over 30 years of experience and expertise, we are dedicated to bringing the best out of the evolvement of different communications technologies and empowering our customers with integrated radio solutions such as broadband Trunking, narrowband Trunking, PoC Trunking, emergency response communication systems as well as command and dispatching systems.

The BelFone Professional Trunking System and Terminals have served customers in over 50 countries and regions. Providing industries users of public safety, public utilities, emergency response, energy and petrochemicals, rail transit, and commercial to achieve safer more efficient, more stable, and more connected communications.

Innovation

BelFone emphasizes a lot on innovation and has been investing over 15% of its annual revenue in R&D. At present, BelFone has 5 R&D centers in China, and its R&D personnel account for about 30% of the total staff number. BelFone is the proud owner of nearly 200 intellectual property patents.

BelFone has been actively pioneering the development of PMR technologies through relentless R&D efforts and has now mastered the mainstream open standard technologies, such as DMR, PoC, LTE, 5G, and traditional analog communications.

Quality Control

BelFone has invested a lot in introducing advanced testing equipment to form a strict quality control system ranging from design, material purchase, manufacturing process to delivery. Each product out of the warehouse needs to go through strict environmental testing, performance testing, and reliability testing including 30000+ pressing test, -20°C—+60°C temperature endurance, salt spray test, vibration test, drop endurance, aging test, etc. And guarantee the quality of products of stability and reliability.

Lean Production

Adhering to the principles of "precision design, lean manufacturing, meticulous management, and sincere service," BelFone leverages automation to systematize production processes, standardize operations, and digitize management. Consequently, improves product yield, production efficiency, and product quality. BelFone leverages automation to systematize production processes, standardize operations, and digitize management. Consequently, improves product yield, production efficiency, and product quality.

RADIOS

From simple voice-only models to feature-rich voice and data radios and Video Communication and Multimedia Applications.

SYSTEMS

BelFone will provide multiple comprehensive systems to meet your service needs.

INFRASTRUCTURE

Base Stations, Repeaters, controllers and gateways are the backbone of your BelFone two-way radio system.

SAFETY MANAGEMENT

Centralize management of your radio network and workforce for effective, efficient communications.

SERVICES

We've got you covered, from pre-installation to post-implementation, with expert support. We can provide OEM and ODM services.

PROFESSIONAL DMR TRUNKING SYSTEM

BelFone DMR Trunking system is an enhanced communication system based on DMR standard. Incorporating the latest DMR Trunking technologies, it integrates voice communication, data transmission, and Trunked dispatch to manage different communication modes more intelligently and bring exceptional digital experience. Characterized by integrated access, interconnectivity, and multilevel networking, this system brings full interconnectivity across modes/systems/departments/carriers for improved management efficiency and enriched management measures.

Regional Networking

BelFone DMR Trunking system is highly compatible with districts, cities, provinces and ministries network construction demands to save infrastructure investment, reduces maintenance costs, decreases complex program, and ensures network to run credibly.

Unified Command and Dispatch

The system effectively integrates wired, wireless, satellite, and digital communication. Satisfying hierarchical command while enabling cross regions, layers, and departments dispatch. Forming a unified, visualized, and intelligent command system to interconnect departments and systems and guarantee reliable and efficient dispatch.

Rich Services

Aside from quality voice, data, and dispatching services, the system supports rich supplementary services to satisfy different user demands. Also, the system can interconnect different systems by using the SIP protocol.

Multi-Layer Encryptions

From advanced digital technology to variety encryption technologies such as: authentication, encrypted air-interface and end-to-end encryption, BelFone DMR Trunking system delivers an effective security guarantee.

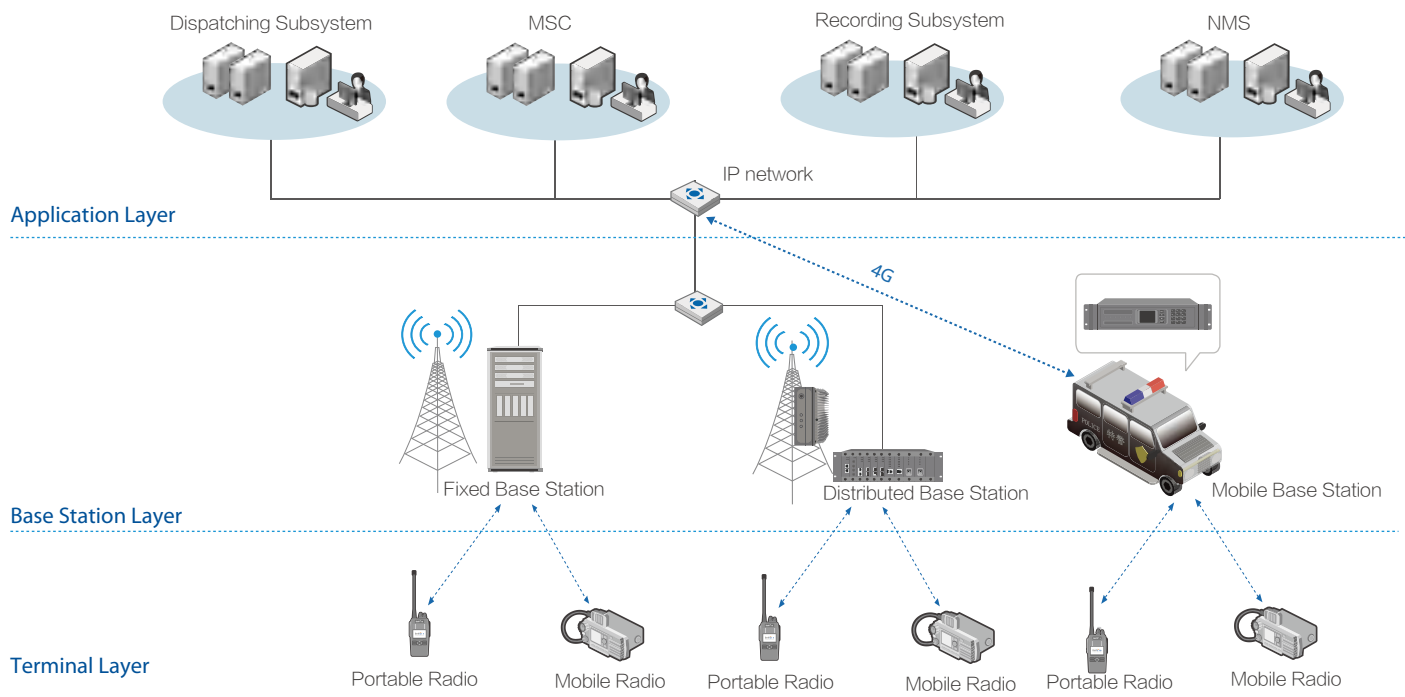

Integrated Video Management

Unified access to various video systems (video surveillance, wireless image transmission, video conferencing, and smartphones) enables seamless interaction and facilitates centralized management and unified dispatching.

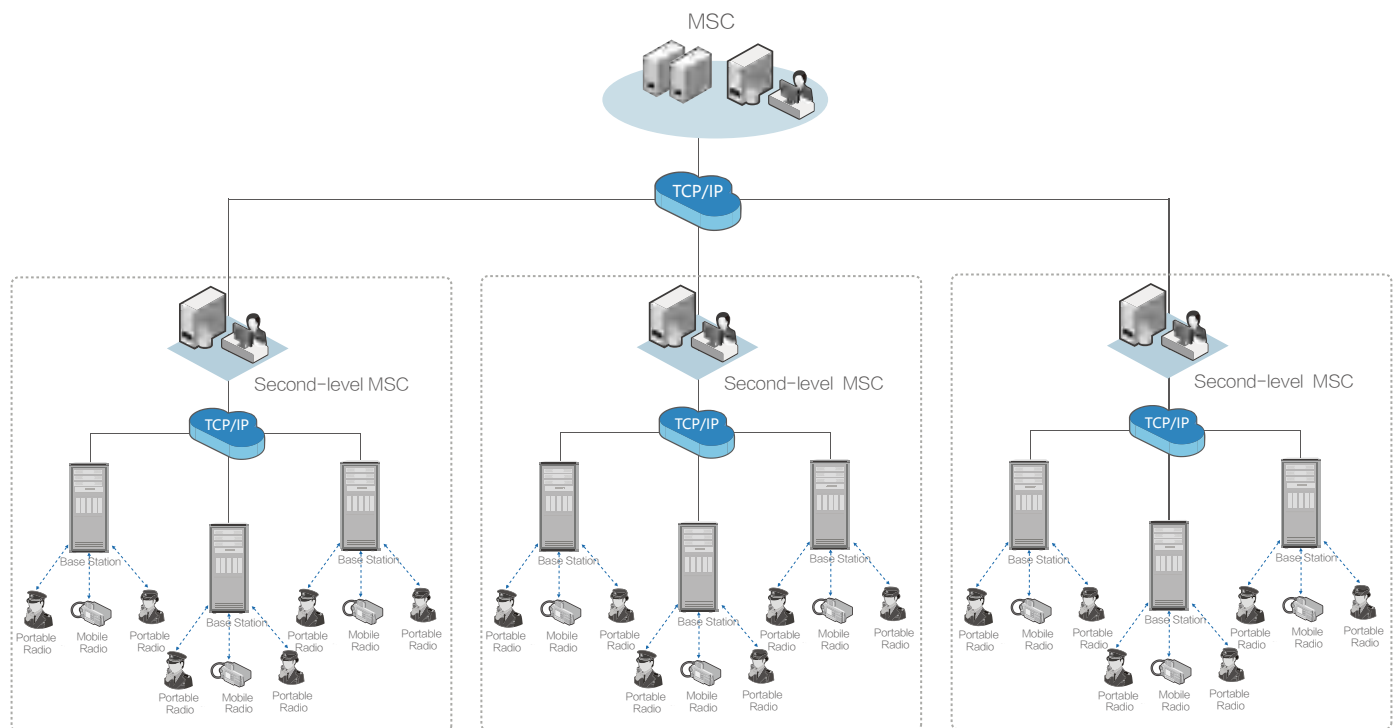

Lower Operational Cost

This system allows local or remote MSC, BS parameter configuring, version management, alarm, and log statistics to better manage and control the entire network.

Multi-MSC Solution

The digital Trunking system can be configurable with first-level, second-level, and third-level core network, through the E1/IP link to realize multi-site multi-base-station networking.

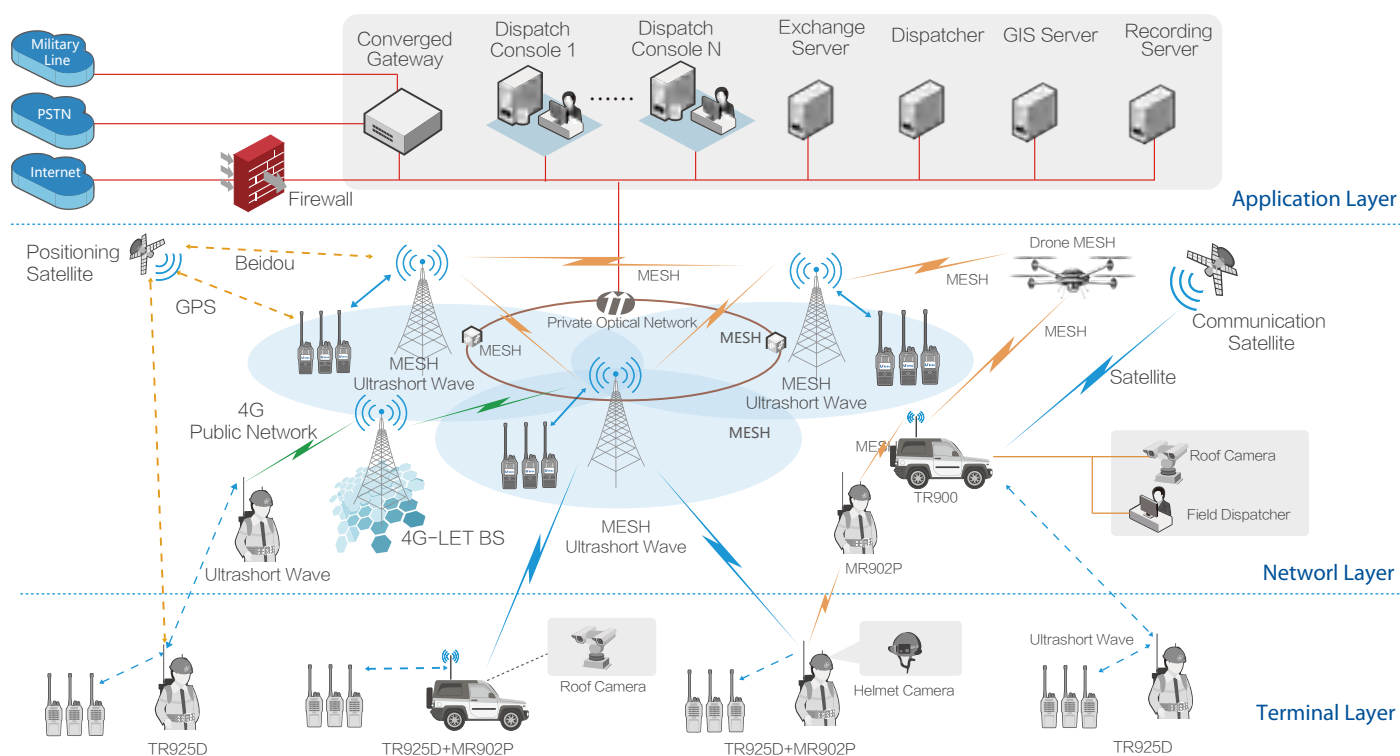

- Simulcast Solution
- Multi-Site Trunking Solution
- Single-Site Trunking Solution

- Converged Communication Solution
- VHF/UHF Solution
- Large Trunking Solution

EMERGENCY COMMUNICATIONS & RESPONSE SYSTEM

When disasters strike, a quick, informed and decisive response will save the day. Reliable networking, stable voice communications, swift dispatching, fast deployment and efficient coordination across different teams are of great importance when the unexpected happen. BelFone Emergency communications& response system adopts backbone –front command –detachment three-layer network for enhanced flexibility to tackle various scenarios. This system combines the best of wireless mesh network, ultra-shortwave communication, satellite communication, and 4G public network to guarantee efficient and stable communication. BelFone BMC system delivers enhanced features and functionality to facilitate unified deployment and management for effective emergency response.

Flexible Networking

The system can be opened to use and be used both independently and networking. It is built with clear command hierarchy for reliable guarantee. It is the dual purpose system that secures local repeater while establishing connections with higher-ups, and interconnect local and higher-up command network to facilitate skip-level command.

Full Coverage

The system integrates satellite, drone, and ground communication to form an air-space-ground full covered network for effective communication guarantee.

Integrated Broadband and Narrowband

Narrowband network provides voice and narrowband data services while the broadband network provides video communication and broadband data services, the system integrates broadband and narrowband networks to ensure timely and stable information sharing and facilitate efficient command.

Enhanced Encryptions

The system incorporates enhanced narrowband audio codec technology, digital error correction, security encryption technology, TF card encryption, AES256, ARC4, and other voice and data encryptions to enhance communication security.

Military Standard

System devices are designed by military-grade, featuring excellent security performance, and great heat dissipation components. It is rugged and durable to endure extreme environments and provide communication assurance.

3+3+3 Networking Designs

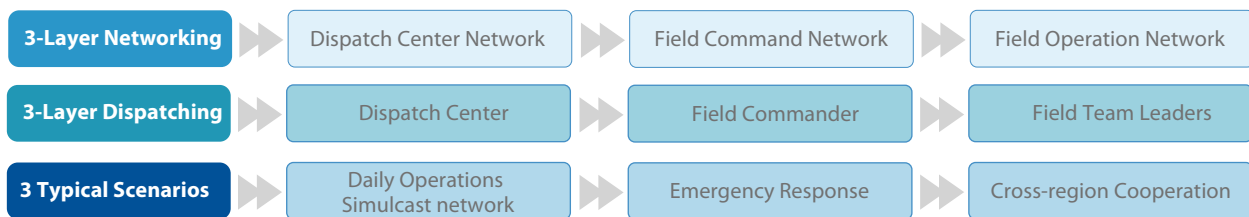

The "3+3+3" technology combines the daily commuting and emergency on-site communication of provincial, municipal, and county-level dispatch centers or command centers, swiftly and accurately conveying information for uninterrupted command and close coordination in combat operations.

Compact and Easy to Operate

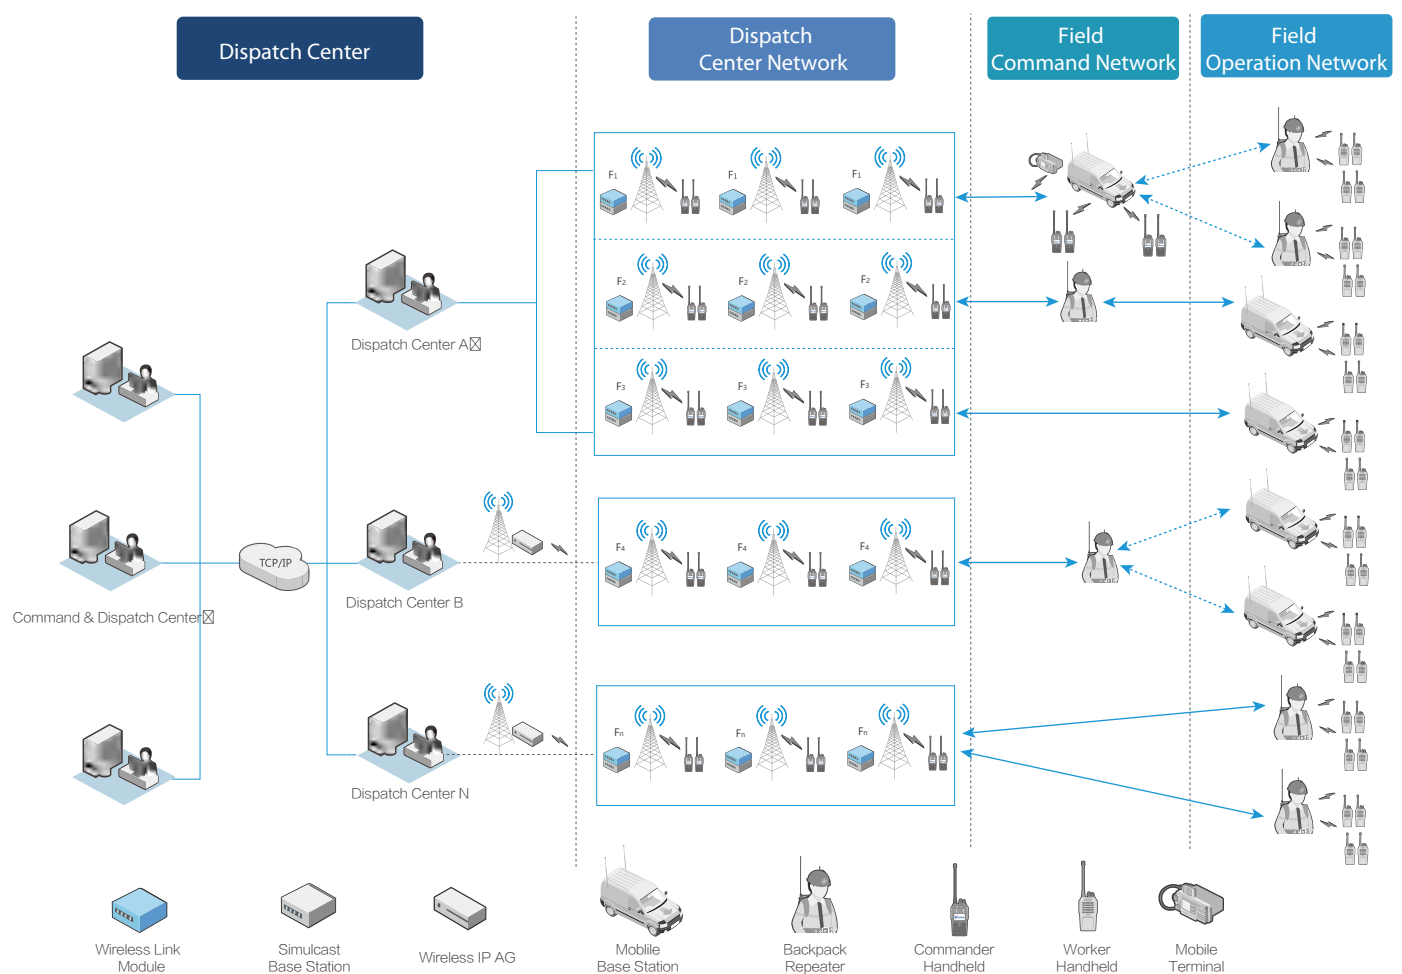

The system is engineered for mission-critical communications and its structure, electrical characteristics, and physical structure are designed to tackle various harsh environments. With good environmental adaptability makes setup, pullout, and transfer simple and fast.

UV Dual Band Dual Mode

Dual-band dual-mode technology addresses issues of low backbone network coverage and too much speech area, guarantees 100% ultra-short wave coverage. This feature achieves cross-band Trunking, combined with simulcast features to further improve the communication experiences.

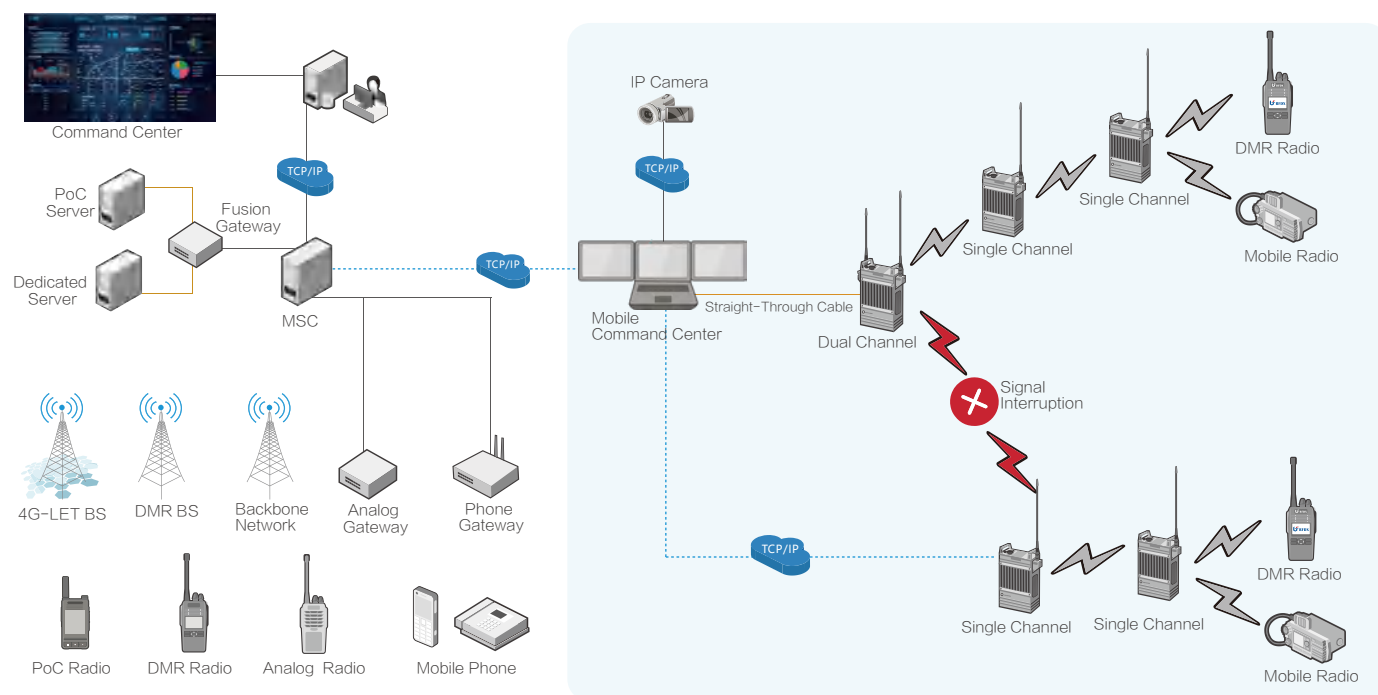

Networking Topology

MC-N(MISSION-CRITICAL NARROWBAND)

The Belfone MC-N system, based on the DMR standard, is an independent command and dispatch solution. Leveraging narrowband Ad-Hoc network technology, it can swiftly set up an emergency communication network for any scenario. Each node in the network can connect to the command and dispatch console, facilitating comprehensive voice and GIS visual dispatch. The system can flexibly integrate with the backend command and dispatch platform through various network methods, offering enhanced communication services and interconnecting multi-level network commands.

Integrated Dispatch

Supports voice dispatch, audio dispatch, GIS dispatch, Trunking communication, network-wide recording, and other dispatching services.

Multi-Mode Access

This system supports the access of PDT/DMR terminal, analog terminals, PoC terminals, mobile phone, wired phone or Trunking Terminals.

Remote Communication

The system supports wired, 4G wireless, and other multiple network access ensures effective command and dispatch.

Multichannel Monitoring

The system supports multi-channel dispatch, allow to monitor other channel communications while performing voice dispatch, ensuring no information is missed.

Pre-Plan Setting

It supports pre-plan settings, enabling comprehensive communication across different frequency or network standards, and facilitating unified command and recording.

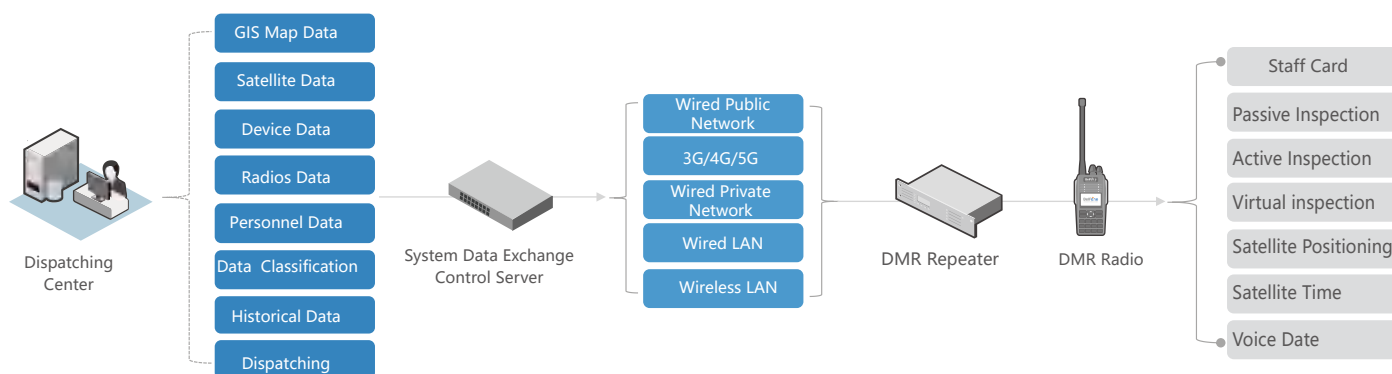

Signaling Dispatch

The system allows dispatch operations including online querying, casual calls, SMS, remote kill/revive, GPS polling, etc., to query device location, subscribe, and playback historical trajectory.

SDC (SMART DIGITAL IP CONNECT) SYSTEM

SDC intelligent IP connect system takes full advantage of DMR digital wireless technology and computer platform to integrate audio services, communication mode, data transmission, and other information applications. Aside from serving critical communications and voice dispatch, the SDC system also offers facilitation for effective staff and log supervision and management. The system allows IP interconnection through wired public networks, 4G networks, wired LANS, and wireless LANS, enabling cross-area coverage and cross-network dispatch.

Smart IP Interconnection

The system employs a B/S architecture and full IP technology, enabling intelligent IP interconnection. Intra-site communication only activates the local repeater. Cross-site individual calls activate the repeaters of the two involved stations. Cross-site group calls activate the repeaters belonging to the group.

Intelligent Management Platform

Cloud-based deployment makes construction simpler and maintenance costs lower, thereby enhancing management and improving work efficiency. The system effectively integrates voice communication with patrol clocking, avoid carrying too many devices and satisfy requirements for daily communication and patrol records.

Intelligent Patrol Management

The system allows passive inspection points, active inspection points, and virtual inspection points. Terminals with RFID functionality enable shift handovers and patrol check-ins. This platform enables patrol routes and rules establishment, checkpoint information query, and indoor personnel location track.

Public-Private Convergence Platform

The system provides dedicated PoC mobile applications and public network terminals. Authorized PoC users can be integrated into the system, enabling interoperability between traditional private network terminals and PoC terminals.

Rich Voice Services

The system can support various voice dispatch functions including individual call/group call/all call, casual group call, dynamic group call, etc. Enables quick grouping, group monitoring, forced group switching, alarm voice uploading, and voice monitoring to facilitate onsite monitoring and satisfy various dispatching needs in different scenarios.

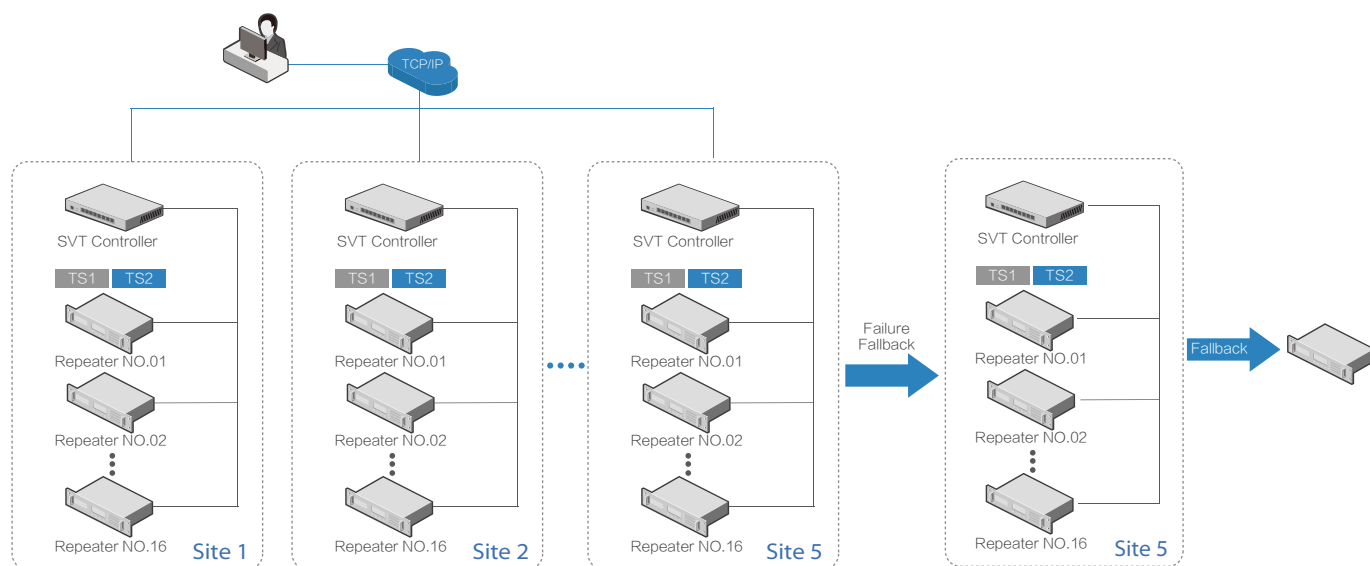

Data Management and Tracing

The system provides real-time data entry, management, and historical data including alarms, patrols, attendance, recordings, shift handovers, location tracking, dispatching, power on/off status, online/offline status, and message sending. This facilitates event management and tracing.

SVT (SMART VIRTUAL TRUNKING) SYSTEM

BeIFone Smart Virtual Trunking System (SVT) is an intellectualized Trunking system that integrates digital voice, SMS, GPS, and unified dispatching platforms. SVT System supports a maximum 16 repeaters with 32 traffic channels, and can flexibly allocate idle channels to improve channel utilization. Therefore, communication problems such as traffic density, concurrency tasks, and too many work groups can be easily solved. SVT could also interconnect different systems by deploying the gateway access to the telephone system and broadcasting system, etc.

Dynamic Channel Allocation

The system effectively integrates channel resources through base station controllers, enabling real-time unified channel management and allocation. This facilitates multi-channel sharing, effectively improving the channel utilization and call completion rates.

Flexible Deployment

Providing flexible deploy modes for different working environments (single-site, multi-site interconnection, access visual dispatching system, etc.) can not only meet daily communication needs but also can be used to carry out emergency command and dispatching.

Base Station Controller

SVT supports a backup controller solution. When the master controller breaks down, the backup controller will automatically take over to ensure the system run normally.

Balanced Repeater Load

SVT can assign different active groups to different repeaters evenly to dynamically allocate channel resources, effectively eliminate call collision, improve the call success rate, and balance the repeater load.

Visualized Command and Dispatch

SVT employs GIS, internet, wireless communication, and cloud-computing technologies to provide voice communication, real-time dispatching (individual call/group call/all call, etc.), casual call, GIS, and broadcasting services, helping to improve work efficiency and responsiveness.

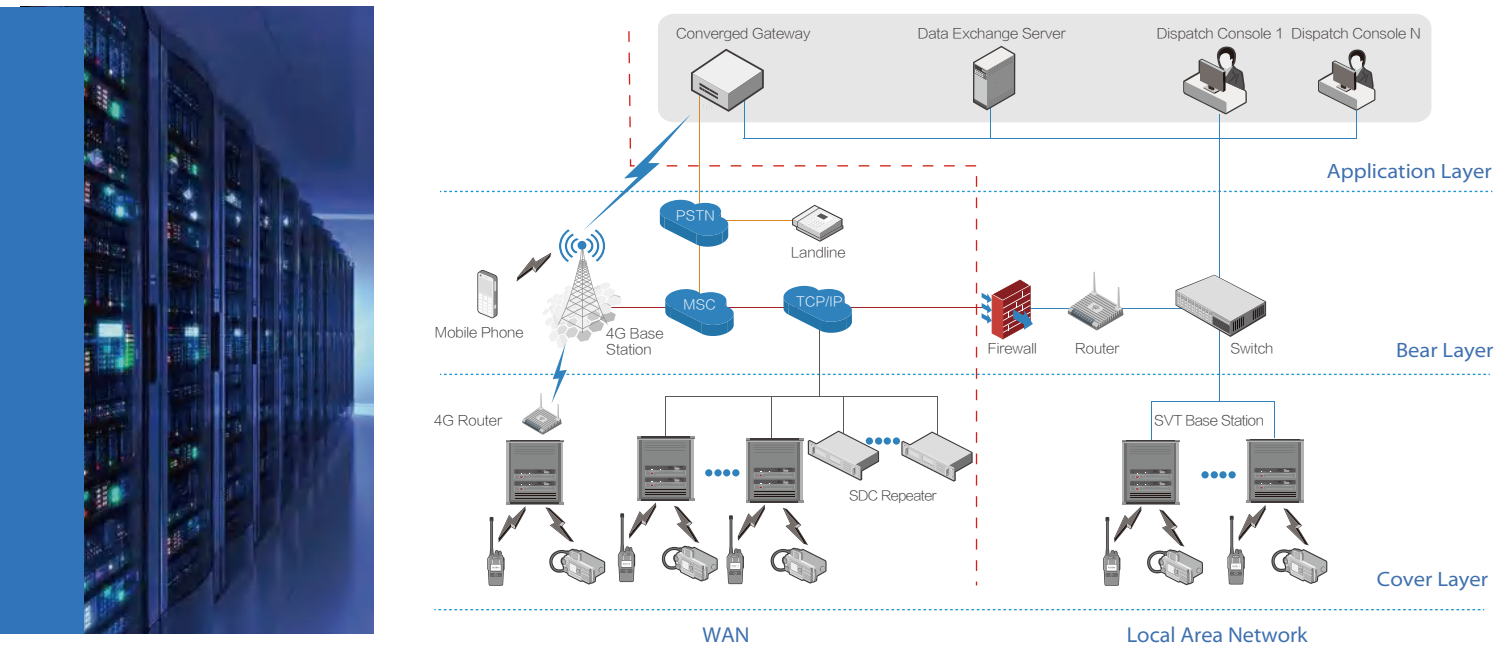

Enhanced Failure Fallback

In both single-site and multi-site interconnection mode the SVT system enables fallbacks to a single repeater to ensure the service runs normally when the master controller breaks down and guarantee smooth communication.

PROCHAT IOT CLOUD SYSTEM

BelFone ProChat IOT Cloud platform is a comprehensive management application for cloud deployment, consists of conference system, alarm system, positioning system, communication system, monitoring system, and IOT system. It is flexible to be used with video, alarm, patrol, and visual communication devices to bring device management, staff management, video /audio conference, instant chat, patrolling clock-in, visual talkback, digital map, data analysis, and other services. Utilizing cloud deployment, BelFone ProChat platform effectively breaks down application barriers of different subsystems and collaboratively work different terminals, achieves integrated management, and saving construction and operating costs.

BelFone ProChat platform integrates talkback, dispatching, video, management, and IOT services. It delivers comprehensive functions and helps public security, armed police, border defense, urban management, railway, forestry, petroleum, transportation, government agencies, and large gathering users to improve response efficiency and bring intelligent communication.

Customer Layer	 Dispatching Client	 Network Management Client	 APP-Client			
Application Layer	Trunking service Audio/Video Service Dispatching Service IOT Service					
Platform Layer	Talkback/Intercom Dispatching Business Media Video Location Recording Playback Conference Querying Data SOS					
Terminal Layer	PoC Radio Intelligent Hybrid Radio Site Enforcement Recorder IOT etc.					

Rich Services

BelFone ProChat system is flexible with wired networks and wireless networks to access and manage PoC radios, site enforcement recorders, multimode radios, etc. Enabling nation-wide communication and significantly reducing construction and operational costs.

Comprehensive Management

The system supports voice communication, personnel positioning, video communication, multimedia messages, patrol clock-in, and other functions to satisfy different communication demands. It enables users to check radios, site enforcement recorders, and other terminals in real-time and supports dispatching, command, statistic analysis, and visual multi-level dispatching, providing powerful data management support and improving dispatching efficiency.

IoT Networking

The BelFone ProChat IoT Cloud System features great IOT expansion capacity, and it is flexible access to embedded devices, Tracker-type positioning terminals, wearable devices of watches-/wristbands/canes, environmental monitoring devices of pressure, temperature, humidity, PM2.5, and more.

Trunking Communications

BelFone ProChat system supports individual call, group call, full duplex individual call, enables predefined group call, temporary group call, dynamic regroup, map area group call, as well as half and full duplex individual call among terminals. Besides that, the system also allows to set call priority.

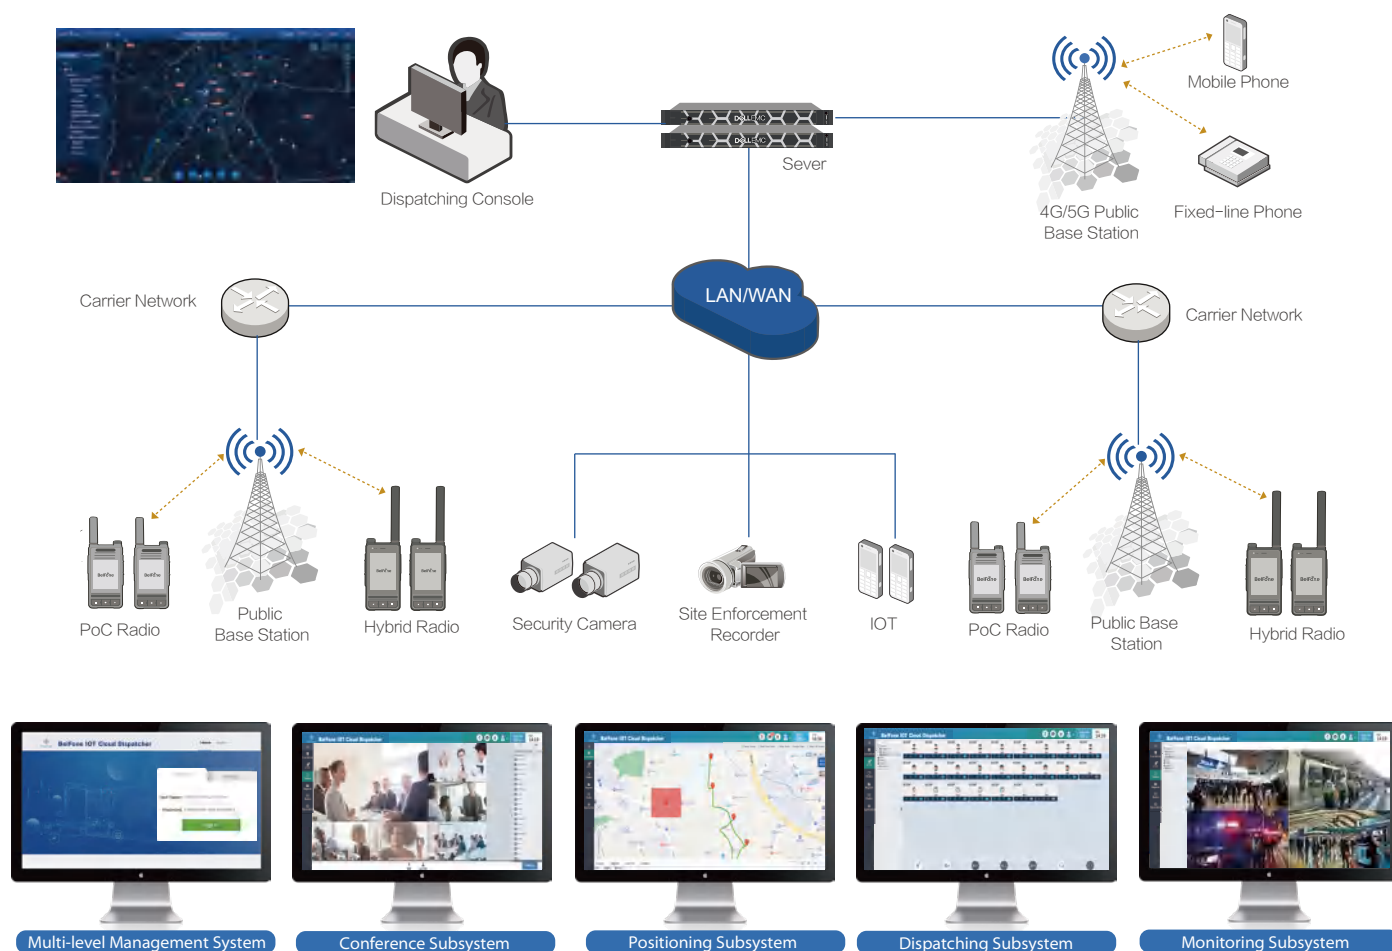

Visual Communication

The system supports point-to-point video call, video polling, video forwarding, and management. Terminals connect staff of different regions by launching individual call and group call to share accurate on-site information. Also, the dispatching console has the capacity to forward video information to desired terminals to ensure timely information sharing. Besides that, video data can be synchronized postback to the dispatch console, facilitating video data storage and management.

Cloud Deployment

The system provides a comprehensive range of options for cloud server deployment and node selection that is availed for those mainstream cost-effective and mature cloud sever (Aliyun, Tencent Cloud, Baidu Cloud, HiCloud aws, Azure, IBM, Google Cloud, etc.).

Networking Topology

BASE STATION

BelFone Base Station is a carrier-level DMR Trunking base station designed with the unit module, featuring enhanced extensibility and rich functions. It supports failure fallback, inter-site call handling, whole site backup for improved security and efficiency, as well as incorporates a perfect backup mechanism to enhance reliability.

BF-TR952 UHF Digital Distributed Trunking Base Station

BF-TR952 is a cost-effective Trunking base station for fast network establishment. Functioned as network access device, BF-TR952 is used to manage wireless access including air interface, access control, mobility control, user resources assignment, etc. BF-TR952 consists of BBU952 and RRU952. It featured flexible deployment to suit different networking scenarios and brings better covering performance.

BelFone digital handheld terminals are based on DMR standards, and they are better and faster for transmission, sound quality, and encryptions. It has both digital and analog modes and can automatically switch according to the received signal. The good compatibility with traditional analog guarantees a smooth transition from analog to digital. It supports DMR Trunking with status information, SMS, satellite positioning, and emergency alarm, etc., which meet the high standard requirements of communication in different industries, and can quickly respond to professional customers anytime and anywhere.

ALARM

NP630 4G PoC Radio

- 4G LTE
- IP68 Protection
- Emergency Alarm
- AI Noise Reduction
- Dual Card Dual Standby
- Multiple Positioning Modes
- Front-Rear HD Dual Camera
- NFC/Bluetooth/Voice Recording

BF-CM630 4G PoC Radio

- 4G All-Network
- Dual Card Dual Standby
- Bidirectional Charging
- OTA Remote Upgrade
- Great Adaptability
- Long Battery Life
- Satellite Positioning

BF-CM626S 4G PoC Radio

- 1.8-inch LCD Screen
- Flat Interface
- 4G All Network
- Diverse Network Coverage
- Built-in Bluetooth
- Dispatch Application
- Real-time Radio Status
- Over-the-air-programming

BF-CM625 4G PoC Radio

- Bluetooth/WIFI
- Visual Dispatch
- Push-to-talk over 4G/LTE Networks
- Long Battery Life
- Multiple Charging Modes
- Over-the air Programming

BF-CM629 4G PoC Radio

- Nationwide Coverage
- Dual SIM Cards
- Multiple Charging Modes
- Individual, Group and All Calls
- Built-in GPS

BelFone analog terminal series is regarded as the classic of analog technology in the industry. We have successively mastered dozens of professional wireless communication patented technologies including speech recognition and single-point modulation. The product still maintains excellent performance in high-intensity and diversified environments. The BelFone analog series has made remarkable achievements in the voice quality and FM and RF output of analog products, noise reduction, and anti-interference stability.

BF-870S Analog Two-way Radio

- VOX
- TOT
- Squelch Levels (0-9)
- Low Power Alert
- Auto Power Save
- CTCSS/CDCSS and STE
- Built-in Torchlight
- Wide/narrow Bands Switchable
- PC Programming
- Monitor/Scan

BF-860 Analog Two-way Radio

- VOX
- TOT
- Low Power Alert
- Auto Power Save
- PC Programming
- Built-in Torchlight
- Wide/Narrow Bands Switchable
- Squelch Levels (0-9)
- CTCSS/CDCSS and STE
- Monitor/Scan

BF-7110 Analog Two-way Radio

- VOX
- Switchable Power
- Timer-out Timer (TOT)
- QT/DQT
- BCL
- Squelch Levels (0-9)
- Channel Prompt
- Low Battery Alert

BF-835 Analog Two-way Radio

- Scrambler
- Time-out Timer (TOT)
- Transmission Beep
- Emergency Alert
- Squelch Levels (0-9)
- Channel Prompt
- Auto Battery Save
- CTCSS/CDCSS

BF-532 Analog Two-way Radio

- Modes Switchable
- LCD Screen Contrast
- H/L Power Switchable
- Prompt Tone
- Communication Logs
- Built-in Flashlight
- Local Alarm
- ANI Code
- Backlight
- Monitor/Scan

BF-530 Analog Two-way Radio

- H/L Power Switchable
- PC Programming
- CTCSS/CDCSS
- Busy Channel Lockout (BCL)
- Programmable Bandwidth
- Squelch Levels(0-9)

BF-5111UV Analog Two-way Radio

- VOX
- Channel Scan
- Lighting/ Flashlight
- Time-out Timer (TOT)
- CTCSS/CDCSS and STE
- 9 Squelch Levels Selectable
- Busy Channel Lockout (BCL)
- High /Low Power Switchable
- Wide/Narrow Bands Switchable

BF-SC500UV Analog Two-way Radio

- TOT
- UV Dual Bands
- CTCSS/CDCSS and STE
- Switchable Powers
- Reverse Frequency
- Wide/Narrow Bands Switchable
- Local Alarm
- Scan/Monitor

BF-332 Analog Two-way Radio

- VOX
- Clear Audio
- Signaling Encryption
- One-Key Frequency Matching
- BCL(Busy Channel Lockout)
- Squelch Levels
- Type-C Interface

BF-325 Analog Two-way Radio

- VOX Function
- Squelch Levels
- Signaling Encryption
- Type-C Interface
- BCL(Busy channel locking)
- One-key Frequency Matching

BF-AP8016 Analog Two-way Radio

- VOX
- Channel Matching
- Squelch Level
- Type-C Charging Mode
- Busy Channel Locking
- LED Indicator
- CTCSS/CDCSS
- PC+ABS Material
- Special Signaling
- Noise Reduction

BF-AP5016 Analog Two-way Radio

- VOX
- Channel Matching
- Squelch Level
- Type-C Charging Mode
- Busy Channel Locking
- LED Indicator
- CTCSS/CDCSS
- Low Battery Alert
- Noise Reduction

BF-AP3018 Analog Two-way Radio

- VOX
- Channel Matching
- Type-C Charging Mode
- Busy Channel Locking
- LED Indicator
- CTCSS/CDCSS
- Special Signaling
- Noise Reduction

OG300 Analog Two-way Radio

- VOX
- Dual Standby
- One Key Reply
- IP67 Protection
- Emergency Alarm
- 10 Types Ringtones
- Type-C Charging mode
